**TORVI**

**Fishing circle  
made of EVA Ø150 mm**

- **Modern EVA material**
- **Lightweight and flexible**
- **Ideal geometric shape**
- **Fluorescent paint coating**

The EVA fishing circle by Torvi is the only one in Russia that is produced on an industrial scale. Unlike artisanal production, an ideal geometric shape is modeled at the factory, due to which the Torvi Fishing Circle is fixed on the surface of water in the manner of a “sucker”. Due to the flexibility of the EVA material, the circle is not deformed or cracked.

Torvi fishing circle is covered with bright fluorescent paint, which is perfectly visible on the water even with strong sun glare, the same fluorescent pigment is also present on the plastic flag (stick).

Torvi Fishing circles made of EVA are a tackle of high catching efficiency for active fishing enthusiasts. They are ideal for catching medium predatory fish on reservoirs from spring to late autumn.

Passing a large space, the Torvi fishing circles themselves "look for" fish, floating to its places of gathering. The mobility of circles gives them a distinct advantage over other gear. Basically, Torvi fishing circles made of EVA are used on lakes or other open water bodies with no or minimal current. Torvi fishing circles are used to catch predatory fish: zander, pike, perch, sometimes catfish and burbot

**Material - EVA**

**Color - white, red fluorescent**

**Diameter - Ø 150 mm**

**Average weight of 1 cup - up to 100 grams**

**Individual packaging - 10 pcs.**

**Group box - 12 packs**

**Office and production address:  
Dzerzhinsky, Moscow Region**

**Lesnaya str., 44**

**Multichannel phone: 8 800 700-93-33**

**Website: [www.torvi.ru](http://www.torvi.ru)**
